# CONSTRUCTION NOTICE

## WORK WILL COMMENCE ON:

---

The TOMS RIVER MUNICIPAL AUTHORITY has contracted with Allstate Power Vac for sewer rehabilitation work in your area. Allstate Power Vac will be using a special “NO DIG” method that is used to renovate defective sewers without the need to excavate. No excavation means less disruption, dirt, and inconvenience to residents. In this process, known as “cured-in-place”, a flexible lining material is placed in the sewer pipe and cured with heat to become a rigid reinforcement for the existing pipe. While this method is minimally disruptive, it may be necessary to temporarily block off sections of streets for heavy equipment. Every attempt will be made to avoid inconveniencing area residents while work is being completed.

During the installation period (about 8 hours), your sewers will be temporarily blocked off. Please limit your use of water as each house connection has only limited storage capacity up to the main sewer. *Limited use of the toilet or washing hands is acceptable*; heavy usage such as laundry, long showers, baths or running water for extended periods must be avoided. This is to prevent sewage backing up into your house or basement. Also at this time we ask that you place a heavy object on your closed toilet lid because our high pressure cleaning process may disrupt the water in the toilet bowl.

**If you have a sump pump connected to your sewer drain, please disconnect the hose or piping from the pump to the sewer drain and redirect it to your lawn, driveway, or other drainage area while the sewer work is in progress. If you are not sure if your sump pump is connected to your sewer drain please contact our Project Manager at the number listed below.**

When the lining process is completed, a distinctive odor similar to glue may be noticed. This sometimes occurs in low-level rooms such as basements. **It is recommended that you fill the trap on all drains (floor, sink, etc.) with water to reduce the likelihood of odors.** In the unlikely event that this should occur in your home, simply vent the area by opening nearby windows until the odor disappears. If you have a washing machine or other appliance that it is hooked into an open drain that has “no trap” it should be disconnected and plugged while the lining process is completed, as should all uncapped or open Sewer lines.

The purpose of this notice is to inform you that the work in your area will take place on:

\_\_\_\_\_ between the hours of \_\_\_\_\_ and \_\_\_\_\_

If you have any questions, concerns or problems please do not hesitate to ask for the on-site supervisor. ALLSTATE POWER-VAC also maintains a 24-hour emergency telephone number: **732-815-0220**

**Allstate Power Vac Site Supervisor:**  
**Allstate Power Vac Project Manager: Al Hickson 732-815-0220**  
**Allstate Power Vac Emergency: 732-815-0220**
